Used

Methyl chloroacetate is an organic compound with the chemical formula C₃H₅ClO₂. It is a colorless transparent liquid, slightly soluble in water, and can be mixed with ethanol, ether, acetone, and benzene. It is mainly used as an intermediate in organic synthesis, for the preparation of the insecticide dimethoate, and as a solvent.

Methyl chloroacetate is used as a solvent and chemical intermediate. It acts as a precursor in the preparation of (carboxymethyl) trimethylammonium chloride esters. Further, it is used in the preparation of octakis-(carbethoxymethoxy)calix[8]arene. It is employed as an extraction solvent during the separation of neutral compounds. In addition to this, it is used in the synthesis of dimethyl carbonate.
